

SWEENEY REFINERY
Sweeny, TX 77480

The Phillips 66 Refinery in Sweeny, TX has been in production for almost 130 years. As our company has grown so has the traffic on some of our roads, which has left them in disarray. Our roads showed damage such as rutting, potholes, spalling, cracking, and ultimately failure. We wanted a RCC Pavement Contractor that could help replace our roads as soon as possible without interfering with the productivity of our facility. The challenge we faced was to find a reputable RCC Contractor, based in Texas, with a strong paving solution that could help address our facilities issues. We reached out to Rollcon LLC to help us accomplish this and stay under budget.

Rollcon, LLC recommended to us that we utilize Roller Compacted Concrete atop of commercial base for our road solutions. Rollcon was able to pave over 400,000 square feet of internal roads without any disruption of our daily production. They were also capable of providing subgrade preparation for these same areas. Rollcon turned a long-term predicament into a long-term solution. This company not only provided a long-term RCC solution, but also made sure to work within our safety protocol and return Zero Incidents.

We highly recommend Rollcon, and their use of Roller Compacted Concrete, just as they were recommended to us. We were impressed by the professionalism of all involved, the consistent open line of communication with them, and the excellent job of pavement that they provided us with.
